EDUCATION

Bangladesh University of Engineering & Technology
B.Sc. in Computer Science & Engineering

Nov 2022 – Expected June 2027

EXPERIENCE

Stealth EdTech Startup (Software Developer)

Apr 2026 – July 2026

Developed an AI-powered Socratic learning platform that helps students learn through interactive questioning, adaptive assessments, and personalized feedback.

EduLytics (Software Developer Intern)

Nov 2025 – Jan 2026

Built the speaking module of an AI-based IELTS platform, integrating the Gemini Live API for real-time speech-to-speech conversation practice. Also developed frontend features (Next.js, Tailwind CSS, TypeScript) and backend services (Express.js, MongoDB) for their academic management platform.

SocioFi Technology (AI Intern)

Apr 2025 – Oct 2025

Developed AI agent projects leveraging RAG, LangChain, and LLM integration to demonstrate applied AI skills.

SKILLS

Languages: Java, Python, C, C++, JavaScript, Dart, TypeScript

Frameworks & Libraries: React, Next.js, Flutter, Node.js, Express, FastAPI, Tailwind CSS, Material UI, Bootstrap

Databases: Oracle, PostgreSQL, MongoDB

AI & ML: RAG, LangChain, Agentic AI, Pandas, NumPy, Scikit-learn, Matplotlib, PyTorch

DevOps & Cloud: Docker, AWS, CI/CD pipelines, GitHub Actions

Tools & Utilities: Git, GitHub, Prisma, Apache JMeter, Supabase, Puppeteer, Zod, Resend, Qdrant

PROBLEM SOLVING

Solved 200+ problems on [LeetCode](#), NeetCode & Codeforces spanning Dynamic Programming, Graphs, Trees, Greedy, Shortest Path, Heaps, and core data structures (Arrays, Hashing, Stacks, Queues, BST).

PROJECTS

- **Pulse – Engineering Health Platform** | React, TypeScript, Express, Supabase, Redis, BullMQ | [GitHub](#)
Built an engineering health platform under the supervision of Spectrum Software & Consulting Ltd., integrating GitHub, Jira, SonarQube, and GitHub Actions across five health categories. Added asynchronous metric collection, AI-generated anonymous surveys, action logging, effectiveness reviews, and semantic search.
- **EngCoach – Adaptive English Learning App** | Flutter, Dart, Riverpod, Firebase, PHP | [GitHub](#)
Built an Android app for Bangladeshi learners with adaptive grammar and vocabulary assessments, personalized practice, Bangla explanations, reassessment, and progress tracking. Integrated bdapps OTP verification and carrier billing, with Firebase accounts and progress synchronization.
- **C Compiler** | C++, ANTLR, Lex | [GitHub](#)
Built a C compiler with symbol tables, lexical analysis, ANTLR4 parsing, and 8086 assembly generation with peephole optimization. Supports type casting, scoping, control flow, recursion, and error detection.
- **DisasterLens** | React, FastAPI, MongoDB | [GitHub](#)
Built a Bangladesh disaster management platform with real-time monitoring, emergency alerts, volunteer coordination, AI impact analysis, geospatial risk mapping, and bilingual support.
- **EcoMealHub** | React, Express, Supabase | [GitHub](#)
Built a food waste reduction app with inventory and expiry tracking, meal planning, authentication, OCR receipt scanning, dashboards, and analytics, supporting SDG-2 and SDG-12.
- **BUET CSE Assignments** | [GitHub](#)
Implemented BUET CSE assignments spanning OOP, data structures and algorithms, design patterns, operating systems, AI, compilers, and signals and linear systems.

ACHIEVEMENTS

- Champion, National Skill Competition 2025 (Web Technologies).
- Finalist Team at Mapathon 2026.
- Ranked Top 10 out of 170 teams at InnovateX Hackathon.
